PROFESSIONAL SUMMARY

Mechanical Engineering PhD candidate specializing in intelligent wearable systems for human movement analysis and digital health. Experienced in building end-to-end solutions that integrate IMU-based sensing, embedded hardware, smartphone applications, machine learning, and haptic feedback for gait analysis and rehabilitation. Skilled in Python, MATLAB, Android Studio/Java, and PyTorch, with six peer-reviewed journal publications.

EDUCATION

Ph.D. in Mechanical Engineering University of Maine, Orono, ME	Expected Dec 2027
GPA: 4.00/4.00 Dissertation: Smart Real-Time Gait Training System	
M.S. in Mechanical Engineering Amirkabir University of Technology (Tehran Polytechnic)	Feb 2020
GPA: 3.65/4.00 Thesis: Trajectory optimization of a robot arm in joint and Cartesian spaces	
B.S. in Mechanical Engineering University of Tehran	Jul 2017

TECHNICAL SKILLS

Programming & Data Analysis	Python, Java, C/C++, NumPy, scikit-learn, PyTorch, SPSS
Mobile & Software	MATLAB, Simulink, TwinCAT, Android Studio, Unity, Git
Wearable & Embedded Systems	IMU sensors, Arduino IDE, SparkFun modules, PCB modules
Biomechanics & Signal Processing	Gait analysis, human activity recognition, feature extraction, OpenSim
Robotics	Surgical robotics, parallel manipulators, inverse kinematics, dynamics, control systems
CAD	SolidWorks

RESEARCH & ENGINEERING EXPERIENCE

Graduate Research Assistant Biorobotics and Biomechanics Lab, University of Maine Orono, ME	Sep 2023 - Present
- Development of real-time wearable sensing systems and Android-based mobile applications for gait analysis, activity recognition, and home-based rehabilitation. - Designed a smartphone-deployed gait assessment system using a foot-mounted IMU to reconstruct foot-height trajectories and classify level walking, stairs, and ramps, achieving 96% accuracy, <1.1 cm error, and 112 ms latency. - Development a lightweight human activity recognition system using two IMUs, and classifier, achieving 99% accuracy for normal locomotion and 93% accuracy for atypical stair-negotiation strategies in older adults. - Architected a home-based haptic feedback gait-training system integrating IMUs, vibrotactile motors, custom Android applications, SparkFun modules, and PCB circuitry for adults aged 65+. - Demonstrated up to 30% improvement in stride length and walking speed during a haptic feedback study, with minimal cognitive demand. - Human-subject validation studies with 85+ participants across gait analysis, and haptic feedback protocols. - Developed real-time algorithms and data pipelines in Java, Python, and MATLAB, signal processing, sensor fusion, biomechanical modeling, and machine learning for mobile health applications.	

- Developed PLC-based control logic for a telesurgical laparoscopic robotic platform using Beckhoff TwinCAT, with Simulink validation of inverse kinematics.
- Built a Python graphical user interface on Raspberry Pi for surgeon-facing robot control, system guidance, warnings, and improved human-robot interaction during testing and demonstrations.
- Coordinated hands-on validation sessions with **6 experienced surgeons**, using training, troubleshooting, and usability feedback to refine surgeon-facing robotic system workflows.

- Designed and assembled robotics and mechatronics setups for student research projects, integrating hardware, CAD, MATLAB workflows, and technical documentation.
- Mentored 6 undergraduate students across 5 research teams, guiding equipment use, troubleshooting, documentation, and project execution.

SELECTED HONORS

Flagship Fellowship Award, University of Maine	Sep 2024 - Sep 2025
Graduate Student Government Award for conference proposal	Mar 2025

LEADERSHIP & SERVICE

Graduate Senator, Department of Mechanical Engineering, University of Maine	Sep 2025 - Present
President, Persian Graduate Student Association, University of Maine	Sep 2024 - Apr 2026

PUBLICATIONS

- 6 peer-reviewed (5 first-author) journal articles in wearable sensing, biomechanics, rehabilitation engineering, and robotics.
- **Sensors** (2026) - Foot-height estimation and locomotion classification using a foot-mounted IMU and smartphone.
 - **IEEE Access** (2025) - IMU-based activity recognition for older adults using minimal biomechanical features.
 - **IEEE TNSRE** (2025) - Real-time haptic feedback effects on gait performance and cognitive load.
 - **Journal of Biomechanics** (2025) - Thigh extension and leg coordination in young and older adult walkers.
 - **International Journal of Robotics and Automation** (2023) - Robot-arm trajectory optimization for production-line applications.
 - **Robotica** (2022) - Screw theory-based constraint wrench analysis for a Delta manipulator.
